

Vial of Life

The Vial of Life speaks for people when they can't speak for themselves. The Vial contains important medical information about their medical histories, medications, recent and past hospital visits, doctors, illnesses, previous cardiograms, DNR (do not resuscitate orders) if appropriate, emergency contacts, and anything else that can assist you and the first responders in an emergency.

The kit is simply two UV coated weatherproof decals: one goes on the front door advising all first responders that complete medical information is on the refrigerator door. The second decal is placed on the refrigerator door on a baggie that contains a sheet of information about the person's medical history, emergency instructions and contact information. It is readily available for the first responders to read and take along with the patient. It saves valuable time and has saved many lives.

The Vial of Life form may be downloaded from the Emergency Preparedness web-site and copied. Both the decals and form can be obtained from:

Fire Station One	105 9th St S.	727-8070
Fire Station Two	731 6th St NW	
Fire Station Three	3325 Central Ave	
Fire Station Four	1800 Fox Farm Rd	
City/County Health Dept.	115 4th St S.	454-6950

For those with Internet access, the online Vial of Life is the best way to use the Vial of Life program: it easily allows you to update your information, and it even expands as needed to accommodate more information or medications, maintaining its format through multiple pages. Visit www.VialofLife.com for more information.
