#### **News and Updates**

#### 1. Safelite AutoGlass Recycles Windshields at 70% of Locations

Safelite Autoglass implemented a windshield recycling program in 2012 in partnership with Shark Glass Recycling North America. Safelite reported that it recycled more than 1.3 million windshields from a majority of locations. The company explained that it hopes to achieve recycling at 100% of its locations. Windshields are made from laminated glass which uses two sheets of glass with a clear resin in between which keeps the glass from shattering when damaged. Shark Glass uses a patented technology to process the glass for use by other industries. One use for the glass is in the backing for carpet and to close the loop, Safelite uses rugs with recycled content at many locations. <a href="http://www.environmentalleader.com/2015/02/12/safelite-recycling-saves-23000-tons-of-waste-from-landfill/">http://www.environmentalleader.com/2015/02/12/safelite-recycling-saves-23000-tons-of-waste-from-landfill/</a>

## 2. Plastic News Reports Price Drops

Plastic News published an article on February 12, 2015 explaining that regional prices for PET bottle resin fell an average of 11 cents per pound in November and December of 2014. This is after the prices fell five cents per pound earlier in the fall. <u>Plastic News</u> also reported that soda sales are down, and that combined with the lighter weight of today's plastic bottles (therefore less plasltic/bottle) has reduced demand for PET bottle resin.

#### 4. Worldwatch Institute Study: Plastic Industry

The <u>Worldwatch Institute</u> recently released their study on plastic manufacturing and recycling around the world. The introductory paragraph explains that demand for plastic continues to rise globally, with the market being driven "by consumerism and convenience, along with the comparatively low price of plastic materials". The introduction also includes the Institute's conclusion that "Recovery and recycling, however, remain insufficient, and millions of tons of plastics end up in landfills and oceans each year." The Institute estimates that "10 million to 20 million tons of plastics end up in oceans each year." The study also notes that Europe recycled plastic at a rate of 26%, and that the U.S. recycled just 9% of the plastic generated here in 2012.

## **5. Port Labor Dispute Slowing Exports of Recyclables**

The situation with West Coast ports continues to impact recycling operations in the U.S. by preventing the export of tons of recyclable commodities. Far West Recycling based in Oregon reports that they are 'sitting on 7,200 tons of material' while waiting for the ports to resume normal operations. <a href="http://resource-recycling.com/node/5683">http://resource-recycling.com/node/5683</a>
